Original estimate:	Not Specified		
Environment:	Windows 11 Home OS build: 22631.4037, Google Chrome Version: 126.0.6478.62 Postman for Web Version 11.10.0-240820-1117		

Rank:	0|i0341z:

Description

When sending a request with a negative cursor key value (e.g., -50) we get a 500 Internal Server Error.

Steps:

1. Send GET request to url: [HIDDEN]

Expected result:

Instead of generating a server error, the API should return a client error response: HTTP Status Code 400 (Bad Request) - `"Cursor value must be a non-negative integer."`

Actual result:

The negative cursor value leads to a 500 Internal Server Error.

```
{
    "error_class": "UnexpectedError",
```

```
    "args": {
        "code": "1724745667439x273790634814998100"
    },
    "message": "Sorry, we ran into a temporary bug and can't complete your
request.  We'll fix it as soon as we can; please try again in a bit!"
}
```

Attachments:	No auth list of tunnels.mp4
Rank:	0|i03427:

Description

It is possible to retrieve the list of funnels without requiring authorization.
Steps:
1. Send GET request to url: [HIDDEN]
2. In the Authorization tab of the request, select the "**No auth**" option instead of "Inherit auth from parent."

Expected result:
The request should return a **401Unauthorized** error.
Actual result:
The unauthorized request returns a **200OK** response.

Attachments:	post empty body.jpg
Rank:	0|i0342n:

Description

It is possible to create a new funnel with an empty body. NB: Stages are required to create funnels. The funnel must have at least 1 stage.

Steps:

1. Send POST request to url: [HIDDEN] with an empty body, as shown below:

```
{
}
```

Expected result:

The expected error type would typically be a *400 Bad Request*. This response indicates that the server could not process the request due to invalid input. Since the creation of a funnel requires certain parameters and an empty body provides none, it would be considered malformed. Also, as the funnel must have at least 1 stage, there should be an informative message stating that the required field is missing.

Example response for a Required Field scenario:

```
{
 "success": false,
 "error": "Validation Error",
 "message": "Missing required field: 'stage_list_custom_stage'."
}
```

Actual result:

201Created result is returned when creating a new funnel with an empty body.

Attachments:	funeel id number.jpg delete wrong data type 404 (4136dca5-4539-48bf-8065-8a167851bde5).jpg
Rank:	0|i0347b:

Description

- The expected error when sending a DELETE request for funnels with an incorrect data type (boolean instead of a string for a unique ID) could likely be *a validation error or a 400 Bad Request response*, indicating that the provided type does not match the expected type. However, the system still treats the boolean data as a string and returns a **404Not Found error.**
- When trying to retrieve the funnel by invalid Id type (number instead of string), the system also treats the integer data as a string and returns a **404Not Found error.**

Steps:
1. Send DELETE request to url: [HIDDEN]
2. Add a boolean value (true or false) as a UniqueID.
3. Send GET request to url: [HIDDEN]
4. Add a number as a UniqueID.

Expected result:
We should get *a validation error or a 400 Bad Request response*, indicating that the provided type does not match the expected type. -"Invalid data for field UniqueID: Expected a string, but got a boolean" (example)

Actual result:
The system still treats the boolean data as a string and returns a **404Not Found error.**

```
{
   "statusCode": 404,
   "body": {
      "status": "MISSING_DATA",
      "message": "Missing object of type funnel: object with id false does not exist"
   }
}
```

Environment:	Windows 11 Home OS build: 22631.4037, Google Chrome Version: 126.0.6478.62 Postman for Web Version 11.10.0-240820-1117		

Attachments:	funnels limit array.jpg funnels cursor string.jpg funnel cursor boolean.jpg funnels limit boolean.jpg
Rank:	0|i0347z:

Description

When checking for incorrect data types across various parameters, no errors are generated, and the validation is considered successful, resulting in a 200 OK status code.

Steps:
1. Send GET request to url: [HIDDEN]
2. Try: set **limit** parameter value to -
    1. boolean (true or false);
    2. array (e.g., ["apple", "banana", "cherry"])
3. Try: set **cursor** parameter value to -
    1. boolean (true or false);
    2. string (e.g., jonh_doe)

Expected result:
Instead of getting a 200OK response, the API should return a client error response, such as: HTTP Status Code 400 (Bad Request)

Example of a Possible Error Response:
```
{
   "error": {
      "code": 400,
      "message": "Invalid data type for 'cursor': expected integer, received string."
   }
}
```

Actual result:
The validations with incorrect data types are considered successful, resulting in a 200 OK status code.

Attachments:	stages limit boolean.jpg stages cursor string.jpg stage uniqueid boolean.jpg
Rank:	0|i03487:

Description

When checking for incorrect data types across various parameters, no errors are generated, and the validation is considered successful, resulting in a 200 OK status code. In the case of retrieving a stage by UniqueID with the wrong data type (e.g., boolean), the system still validates it as a string and returns a 404 **Not Found** error code.

Steps:
1. Send GET request to url: [HIDDEN]
2. Try: set **limit** parameter value to boolean (true or false);
3. Try: set **cursor** parameter value to string (e.g., example@example.com)
4. Send GET request to url: [HIDDEN] /:UniqueID
5. Try: set UniqueID value to boolean (true or false)

Expected result:
Instead of getting a 200OK response, the API should return a client error response, such as: HTTP Status Code 400 (Bad Request)

Example of a Possible Error Response:
```
{
   "error": {
     "code": 400,
      "message": "Invalid data type for 'cursor': expected integer, received string."
   }
}
```

Actual result:
The validations with incorrect data types are considered successful, resulting in a 200 OK status code or 404 Not Found error code.

[T12CA-65] Stages API - Wrong sorting order sort_field name_text Created: 28/Aug/24 Updated: 27/Sep/24

Status:	To Do
Project:	CRM APP
Components:	"API" "Stages Management" "Error Handling" "Backend Services"
Affects versions:	None

Environment:	Windows 11 Home OS build: 22631.4037, Google Chrome Version: 126.0.6478.62 Postman for Web Version 11.10.0-240820-1117

Attachments:	stages sorting name wrong.mp4 stages sorting desc wrong.mp4
Rank:	0|i034bz:

Description

Stages sorting by name_text by both descending=true and descending=false returns incorrect results. E.g., in both requests (with descending=true and descending=false, sort_field name_text) the order is:

1. "name_text": "Initialize "
2. "name_text": "Revise "
3. "name_text": "Determine goals "
4. "name_text": "Build the concept "
5. "name_text": "Initial Contact " , etc.

Steps:

1. Send GET request to url: [HIDDEN]?sort_field =name_text
2. Send GET request to url: [HIDDEN]?sort_field =name_text&descending=true
3. Verify that in both cases the sorting has wrong order

Expected result:

For the sorting order by name_text, the objects should be sorted in alphabetical order ASC: A to Z.

For the sorting order by name_text & descending=true, the objects should be sorted in alphabetical order DESC.

Actual result:

Both requests return the list of objects sorted by_name (asc or desc) in a random order.

}
Expected result:
The expected error type would typically be a *400 Bad Request*.
Response Example:
{
  "success": false,
  "error": "Validation Error",
  "message": "The 'name_text' field must not exceed 21 characters. Please shorten the name to meet the character limit."
}
Actual result:
201Created result is returned when creating a new stage with a stage name over 21 characters.

[T12CA-91] Stages API - No error when replaces parameters with incorrect data types (color_option_colors - boolean) Created: 29/Aug/24 Updated: 27/Sep/24

Status:	To Do
Project:	CRM APP
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	High
Reporter:	Darya Prokharchyk	Assignee:	Unassigned
Resolution:	Unresolved	Votes:	0
Labels:	None		

Remaining Estimate:	Not Specified
Time Spent:	Not Specified
Original estimate:	Not Specified
Environment:	Windows 11 Home OS build: 22631.4037, Google Chrome Version: 126.0.6478.62 Postman for Web Version 11.10.0-240820-1117

Attachments:	PUT stage color boolean.jpg
Rank:	0|i034iv:

Description

When replacing the color_option_colors with the wrong data type (boolean instead of string), no errors are generated, and the validation is considered successful, resulting in a **204No Content** status code. In this case, we expect the system to return a 400 **Bad Request** error code.
Steps:
1. Send PUT request to url: [HIDDEN]
2. Set color_option_colors value to boolean (true or false)

Expected result:
Instead of getting a 204No Content response, the API should return a client error response, such as: HTTP Status Code 400 (Bad Request)

Actual result:
The request with incorrect data type is considered successful, resulting in a 204 No Content result.

[T12CA-93] Stages API, DELETE - Wrong error code when the expected Id type does not match the provided type Created: 29/Aug/24 Updated: 27/Sep/24

Status:	To Do
Project:	CRM APP
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	Medium
Reporter:	Darya Prokharchyk	Assignee:	Unassigned
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		

Original estimate:	Not Specified
Environment:	Windows 11 Home OS build: 22631.4037, Google Chrome Version: 126.0.6478.62 Postman for Web Version 11.10.0-240820-1117

Attachments:	DELETE stage boolean.jpg
Rank:	0|i034jb:

Description

The expected error when sending a DELETE request for stages with an incorrect data type (boolean instead of a string for a unique ID) could likely be *a validation error or a 400 Bad Request response*, indicating that the provided type does not match the expected type. However, the system still treats the boolean data *as a string* and returns a **404Not Found error.**

Steps:
1. Send DELETE request to url: [HIDDEN]
2. Add a boolean value (true or false) as a UniqueID.

Expected result:
We should get *a validation error or a 400 Bad Request response*, indicating that the provided type does not match the expected type. -"Invalid data for field UniqueID: Expected a string, but got a boolean" (example)

Actual result:
The system still treats the boolean data as a string and returns a **404Not Found error.**

```
{
    "statusCode": 404,
    "body": {
        "status": "MISSING_DATA",
        "message": "Missing object of type funnel: object with id false does not exist"
    }
}
```

[T12CA-102] Leads API - Possible to retrieve the list of leads without authorization

Attachments:	lead limit 101.jpg
Rank:	0|i034lz:

Description

When setting the "limit" value over 100 (max limit), the list of all leads is still shown.
Steps:
1. Send GET request to url: [HIDDEN]?limit=101

Expected result:
Instead of the 200OK response, an informative error message should be displayed to the user indicating that the limit has been exceeded. We might receive a 400 Bad Request.
Actual result:
The 200OK response is returned.

[T12CA-105] Leads API - No error when validating incorrect data types Created: 29/Aug/24 Updated: 27/Sep/24

Status:	To Do
Project:	CRM APP
Components:	None
Affects versions:	None
Fix versions:	None

Type:	Bug	Priority:	High
Reporter:	Darya Prokharchyk	Assignee:	Unassigned
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		
Environment:	Windows 11 Home OS build: 22631.4037, Google Chrome Version: 126.0.6478.62 Postman for Web Version 11.10.0-240820-1117		

Attachments:	leads cursor true.jpg leads limit boolean.jpg
Rank:	0|i034m7:

Description

When checking for incorrect data types across various parameters, no errors are generated, and the validation is considered successful, resulting in a 200 OK status code.

Steps:
1. Send GET request to url: [HIDDEN]
2. Try: set **limit** parameter value to - boolean (true or false)
3. Try: set **cursor** parameter value to - boolean (true or false)

Expected result:

Instead of getting a 200OK response, the API should return a client error response, such as: HTTP Status Code 400 (Bad Request)

Example of a Possible Error Response:

```
{
   "error": {
      "code": 400,
      "message": "Invalid data type for 'cursor': expected integer, received boolean."
   }
}
```

Actual result:

The validations with incorrect data types are considered successful, resulting in a 200 OK status code.

[T12CA-107] Leads API - Negative cursor value gives incorrect error code Created: 29/Aug/24 Updated: 27/Sep/24

Attachments:	lead empty body.jpg
Rank:	0|i034sn:

Description

It is possible to create a new lead with an empty body. NB: company_text email_text are required fields.
Steps:
1. Send POST request to url: [HIDDEN] with an empty body, as shown below:
    {
    }
Expected result:
The expected error type would typically be a *400 Bad Request*. This response indicates that the server could not process the request due to invalid input. Since the creation of a lead requires certain parameters and an empty body provides none, it would be considered malformed. *Also*, as the lead must have a company name and an email, there should be an informative message stating that the required fields are missing.
Actual result:
201Created result is returned when creating a new lead with an empty body.

Description

It is possible to create a new deal with an empty body request.
Steps:
1. Send POST request to url: [HIDDEN]
2. {
3.

}
Expected result:
The expected error type would typically be a *400 Bad Request*. Since the creation of a deal requires certain parameters and an empty body provides none, it would be considered malformed.
Actual result:
201Created result is returned when creating a new deal with an empty body.

[T12CA-196] Deals API - Wrong error code when searching deal by incorrect Id type
Created: 05/Sep/24 Updated: 27/Sep/24

Description

When retrieving a deal by UniqueID with the wrong data type (e.g., boolean), the system still validates it as a string and returns a 404 Not Found error code.

Steps:
1. Send GET request to url: [HIDDEN]
2. Set UniqueID value to boolean (true or false)

Expected result:

The API should return a client error response, such as: HTTP Status Code 400 (Bad Request)

Example of a Possible Error Response:

```
{
   "error": {
      "code": 400,
      "message": "Invalid data type for 'UniqueID': expected string, received boolean."
   }
}
```

Actual result:

The validation with incorrect data type returns 404 Not Found error code.
